Challenge #7: Adding Screens

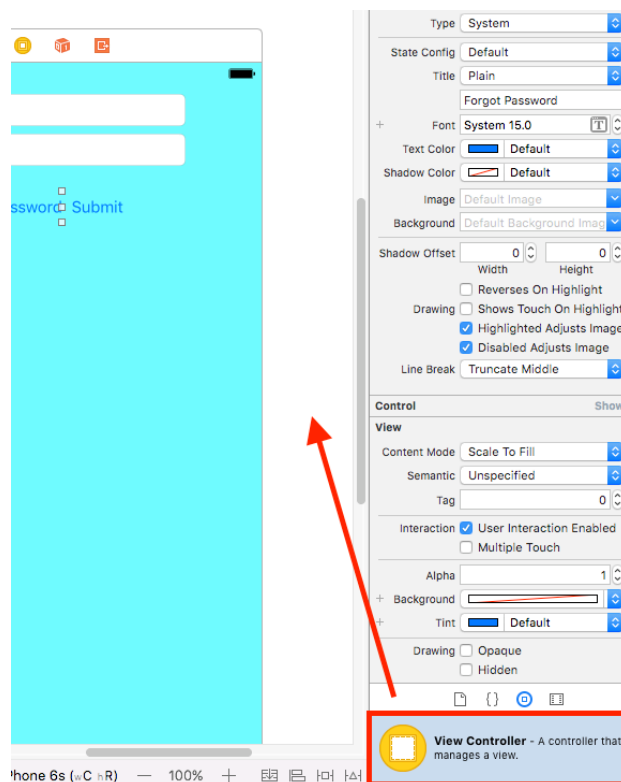

By Brian Moakley

In this challenge, you'll add an additional screen to the starter. The first screen is a simple login screen. The second screen is meant for the user to reset his password. You'll use a couple screens to do this.

Getting Started

Open the starter project and check out the storyboard. You'll see you have one view controller already set up for you.

Drag a new view controller right next to the existing view controller.

Now, you need to create a segue. **Control-click** the **Forgot Password** button and drag to the new view controller. When you release the mouse button, make sure to select **Display Modally**.

Now you need to layout your view controller. Add some controls so the view controller looks like this:

All it contains is a label that reads: Email, a text field, and a submit button. When the user taps the Submit button, the modal screen should dismiss.

This requires you to create a new view controller object and create an IBAction that will call `dismiss()`.

If you get stuck, check out the challenge solution.
