Challenge H: Constraints using the Visual Format Language

If you have reached this stage, I want to extend a hearty congratulations. You've scaled the hardest part of Auto Layout and while there are still some climbing to be done, the hardest part of this course is behind.

In this challenge you are going to convert our book info app to use the Visual Format Language:

Remember to use metrics for the numbers. It helps add meaning to the numbers and makes the code easier to understand. Remember, if you get stuck, you can leave a comment in the forums.

Challenge Hint

The Visual Format Language can be a bit tricky until you get the hang of it. Then it will help you create many constraints quickly and with a lot fewer lines of code. Also keep in mind that by passing in a single line of Visual Format Code, you will get back an array containing your constraints, even if only one is being created.
