# Challenge I: Debugging Auto Layout

While you're learning to get the hang of Auto Layout, you'll likely run into some instances where you're not sure why the layout is doing what it's doing. This tutorial gave you some insights on some debugging techniques available to you.

This challenge is composed of two projects – both of them broken. Your job is to solve each of the issues so that the projects run.

## Challenge Hint

As always, remember not to panic.

When you receive a bunch of errors in the logs, analyze the top error first then work your way down.

Check to see the type of constraint that is giving you the issues.

Make sure all your constraints are being added.

If you see conflicting constraints, determine the nature of the conflict so you can decide which constrain can stay and which constraint should go.
