PROGRAMMING IN SWIFT
PART 1
CORE CONCEPTS

BOOLEANS

Create a constant called myAge and set it to your age. Then, create a constant called isTeenager that uses Boolean logic to determine if the age denotes someone in the age range of 13 to 19.

```
37
38  // TODO: Write solution here
39
```

Create another constant called theirAge and set it to the age of the author of these challenges (tutorial team member Matt Galloway), which is 30. Then, create a constant called bothTeenagers that uses Boolean logic to determine if both you and him are teenagers.
