Challenge #6: Alert View Controller

By Brian Moakley

In this challenge, you'll print out the response of the guessing game to the user, using an alert view controllers. The app is entirely setup for you. You just need to print out the message.

Getting Started

Open the starter project and the **ViewController.swift** file. You'll see a a bunch of code, but you are looking for the comment: `// put alert message here`.

Replace the comment with an actual controller and display it to the screen. Set the **title** to **Guessing Game** and the **message** to the `message` variable. It should have one button that reads: **OK**. This button should dismiss the view controller.

For any questions, check out the challege completed project.
